If you believe that this document breaches copyright please contact librarypure@kcl.ac.uk providing details, and we will remove access to the work immediately and investigate your claim.

FIGURES

Figure 1. Unemployment rates by age categories for males (2004, 2006, 2010)

2004

2006

2010

Figure 2. Association between co-residence and average depression scores by countries (pooled sample)

Figure 3. Overview of the effect of intergenerational co-residence on depressive symptoms levels by specification

Notes:

Main model - main specification, with covariates as in Tables 2 & 3.

Homeowners only - includes all covariates from the main model but focuses on a subsample of homeowners

Age groups of children - main specification, plus three age categories for each child

Age groups of the youngest child - main specification, age of the youngest child in five-year age categories

Combined children characteristics: replaces the controls for children's characteristics by summary measures of the proportion of daughters, the proportion of married children and the proportion of employed children out of up to four children

Interaction country and time - main specification, plus an interaction term between country of residence and year of survey
